PROFESSIONAL SUMMARY

High-impact **Product Designer with 4+ years of experience** specializing in enterprise SaaS, data-heavy dashboards, and AI-powered interfaces. Uniquely leverages a strong professional background in **Cognitive Psychology and Human Behavior** to systematically minimize cognitive load, simplify hyper-complex user workflows, and architect highly scalable component systems. Proven track record of owning end-to-end product lifecycles and partnering cross-functionally across engineering, data science, and product management to ship robust, production-ready experiences.

STRATEGIC VALUE & EDUCATION

- Bachelor of Arts in Cognitive Psychology & Human Behavior** | IGNOU (Graduated July 2026)
 - Strategic Advantage:** Pursued concurrently with full-time corporate design roles to explicitly apply principles of mental models, cognitive ergonomics, and behavioral frameworks to complex user interfaces.
- Advanced UI/UX Design Certification** | Delhi Skill and Entrepreneurship University (Completed January 2021)
Rigorous immersive specialization covering end-to-end framework execution: User Research methodologies, systematic information architecture planning, responsive wireframing, high-fidelity interactive prototyping, and data-driven Usability Testing.

CORE SKILLS

- Design & Strategy:** Product Strategy, Interaction Design, Enterprise Information Architecture, Role-Based UX, Generative AI Interaction Design, User Journey Mapping, User Research, Multi-Variant Usability Testing
- Systems & Tools:** Figma Advanced Component Architecture, Scalable Design Systems, Cross-Platform UI Design Patterns, Comprehensive Design QA Frameworks, Production Developer Handoff
- Technical Fundamentals:** HTML5, CSS3, JavaScript Fundamentals, AI-Assisted Design Tooling, Advanced Prompt Engineering Workflows

PROFESSIONAL EXPERIENCE

- Product & UI/UX Designer** | HestaBit — Noida, India April 2023 – Present
- Owned end-to-end UX architecture for 10+ complex web and mobile enterprise products, successfully translating deeply technical, ambiguous business requirements into highly intuitive, role-based analytics dashboards.
 - Accelerated engineering sprint cycles and product timelines by 30% through rapid end-to-end deployment of 220+ production-ready screens across 6 restricted AI system applications while ensuring absolute structural coherence.
 - Eliminated structural front-end engineering design debt by constructing and scaling a reusable Figma design system spanning 80+ state-driven dynamic components, standardizing collaborative design-to-code workflows.
 - Integrated Large Language Models (LLMs) strategically throughout structural design lifecycles to efficiently map deep information architecture schemas, anticipate intricate systemic edge cases, and refine contextual UX copy.
 - Partnered daily within an agile ecosystem alongside Cross-Functional Engineering Leads, Business Analysts, and Data Scientists to orchestrate strict Design QA, evaluate engineering feasibility limits, and secure 100% accurate system implementation.

Graphic & Visual Designer | AB Web Technologies — Noida, India

February 2022 – March 2023

- Established robust core visual identity frameworks, typography standards, and structural digital canvas configurations, anchoring basic layout and spacing hierarchies that directly paved a seamless transition into complex product UX.
- Collaborated side-by-side with localized digital marketing, growth, and creative strategy teams to standardize cross-platform brand architectures and iterate cohesive interfaces across key visual touchpoints.

Freelance & Contract Product Designer | Remote / Independent

March 2021 – February 2022

- Partnered directly with early-stage founders and product visionaries to sketch, iterate, and construct 0-to-1 minimum viable product (MVP) structures, designing low-to-high fidelity user journeys based on baseline market validations.
- Conducted localized user feedback discovery loops to systematically turn isolated user pain points into real component features inside active design prototypes.

SELECTED STRATEGIC PROJECTS

Gaia — AI Hiring Campaign Platform (HestaBit Product Portfolio)

- Architected the comprehensive end-to-end framework layout covering campaign configurations, multi-variant ad generation modules, precise permission systems, and localized financial budgets across 140+ core screens.
- Mitigated cognitive friction inside high-density windows by applying robust reusable UI patterns that mapped data-heavy automated recommendations and interactive AI token allocations transparently.

Y22 AI — Enterprise Sales Coaching Platform (HestaBit Product Portfolio)

- Translated highly specialized sales analytics data into legible, action-oriented role-based visualization layouts across 60+ unified production screens.
- Designed contextual conversational loops and chat UI configurations, proactively syncing with technical infrastructure boundaries to secure complete interface uniformity.

Helpline Club — AI Voice Platform (HestaBit Product Portfolio)

- Mapped entire information architecture pathways and simplified intuitive onboarding pathways across 40+ responsive application frames crafted specifically for older or non-technical demographics.
- Integrated gamified user mechanics, custom persona selection widgets, and clean calendar scheduling pipelines across 15+ micro-screens.
